

OWNER UPDATE · MAY 2026

What We Built For You.

A complete recap of the work shipped this build cycle:
website, SEO, pressure washing launch, and the back-office
system that runs the business.

AT A GLANCE

What Changed This Cycle.

Over the past build cycle, your website went from a portfolio with stock-photo placeholders to a fully-loaded local marketing engine, your back-office CRM was rebuilt from the ground up, and your new pressure washing service line has a complete launch campaign ready to ship. Here are the headline numbers.

The bottom line: the website is now backed by your real work, ranks for the keywords real customers actually search, has a complete content engine for your new pressure washing service, and the admin system you log into actually works.

SECTION ONE · WEBSITE

Real Photos Replaced Stock.

Before this cycle, your portfolio used Unsplash stock photos pretending to be your projects. Now every category is backed by your real work — 280+ photos imported, organized, and wired into the site.

What we shipped

- **Imported your full Kitchen, Paint, and Tile galleries** — 232 new photos plus the existing 40 bathroom photos and 80 flooring photos.
- **Restructured the portfolio** — removed the "Full Remodel" and "Custom" filler categories and added **Tile Work** as a featured category.
- **Rebuilt the Painting service page** — every section now uses real photos from your jobs (open-coffered-ceiling kitchen, navy-wall hallway, two-tone shaker cabinets, sun-ray feature wall).
- Replaced the fake before/after slider with a real **Recent Transformations** grid plus an **Inside the Job** section showing actual prep work.
- Added captions to every project that explain what we did, the timeline, and the investment range.

Why this matters

Real photos with descriptive captions do three things at once: they build trust with prospects who can spot stock photos a mile away, they feed Google Images traffic from people searching for "kitchen repaint Atlanta" or "tile installation Buckhead," and they give your sales team a portfolio they can actually point to during consultations.

SECTION TWO · SEO

Found, Indexed, and Trusted.

Your site already had decent SEO bones, but several critical pieces were broken or missing. We fixed the breaks and added the structured data that helps Google understand and rank you.

Critical fixes

- **Removed a placeholder Google verification code** that was literally the string "your-google-verification-code" — your Search Console wasn't actually connected.
- **Removed a fake aggregate rating** claiming 47 reviews at 5.0 stars. That kind of unverified review schema is a Google manual-penalty risk; we noted exactly how to repopulate it once your real Google Business Profile is wired in.
- **Built the missing /luxury-home-painting page** that was listed in the sitemap but didn't exist (a 404 sent to Google).
- **Replaced every broken Open Graph image reference** with real local photos so Facebook and text-message link previews now show your actual kitchens, not blank squares.

Structured data added

- **Breadcrumb schema** on portfolio pages and all painting subpages — helps Google show breadcrumb trails in search results.
- **FAQ schema** on the cabinet, interior, and exterior painting pages — eligible for "People also ask" rich results.
- **Project / CreativeWork schema** on every portfolio detail page — uses your real testimonials and scope data.
- **Image sitemap** at /image-sitemap.xml exposing all 280+ gallery photos with titles and captions to Google Images.

Sitemap and discoverability

- All 7 portfolio detail URLs added to the sitemap.
- All 6 new neighborhood pages added.
- All 4 new content pages (cost guides, before/after, paint-or-replace) added.
- Footer rebuilt with a dedicated **Services** column linking to all 7 service pages — strong internal-link signal that boosts every service page's rank.

SECTION THREE · NEW CONTENT

11 New Pages Targeting High-Intent Searches.

These pages target keywords your competitors aren't writing for. Each one is a real, SEO-loaded page with FAQ schema, breadcrumbs, and tight Atlanta-specific copy.

Page	What it captures
/cost-of-cabinet-painting-atlanta	"how much to paint cabinets atlanta" — itemized 2026 pricing
/cost-of-house-painting-atlanta	"house painting cost atlanta" — interior + exterior tables
/paint-or-replace-kitchen-cabinets	"paint or replace cabinets" — comparison table, decision guide
/before-and-after	Real transformations gallery — converts mid-funnel traffic
/luxury-home-painting	"luxury home painting atlanta" — premium positioning
/painting-contractor-vinings	Hyperlocal Vinings page
/painting-contractor-east-cobb	Hyperlocal East Cobb page
/painting-contractor-smyrna	Hyperlocal Smyrna page
/painting-contractor-dunwoody	Hyperlocal Dunwoody page
/painting-contractor-brookhaven	Hyperlocal Brookhaven page
/painting-contractor-johns-creek	Hyperlocal Johns Creek page

Why hyperlocal pages matter

Atlanta is dense with painting contractors competing for "painting contractor atlanta." Almost nobody is competing for "painting contractor Vinings" or "painting contractor East Cobb" — but those are exactly the searches your most valuable customers make. Each of these pages takes about 30 seconds to load, has its own keyword-rich URL, and links back to your service pages.

SECTION FOUR · PRESSURE WASHING LAUNCH

Complete Launch Campaign, Ready to Ship.

You bought the hot-water trailer. We built the launch campaign around it. Four senior-level design and copy streams ran in parallel and produced a complete go-to-market kit.

Brand foundation

- **24 logo files** — full color, white-knockout, mark-only, wordmark — at four sizes each.
- **Brand color tokens** in JSON and CSS, with sampled hex values from the actual logo (navy #17233B, green #365E1F).
- **Type system, spacing system, and lockup samples** documented for future designers.

Social media graphics (12 ready-to-post)

- **6 feed graphics** (1:1 and 4:5) for Facebook and Instagram main feed.
- **6 Story / Reel covers** (9:16) for IG Stories and FB Stories.
- All 12 carry the official Bridgepointe logo in white knockout, branded color palette, and a "PRESSURE WASHING" sub-brand identifier.
- Topics covered: launch announcement, why hot water matters, pollen-season hook, pricing menu, before/after template, commercial/B2B pitch.

Print and out-of-home collateral

- **Door hanger** (4.25" x 11", 300 DPI, print-ready front + back).
- **Yard sign** (24" x 18") — high-contrast, reads from 30 feet.
- **Trailer rear panel** (8' x 4') — your trailer in traffic becomes a billboard.
- **Trailer side panel** (6' x 2').
- **Business cards** with pressure washing flagged on the service list.
- **README** with vendor recommendations (GotPrint, SignsOnTheCheap, FastSigns Atlanta) and quantities.

Marketing copy library

- **90-day Facebook content calendar** — 48 fully-written posts (4 per week) with image direction, captions, and hashtags.
- **Google Ads campaign** — 3 Responsive Search Ads with 45 headlines, 12 descriptions, 15 sitelinks, 24 callouts, 25 keyword ideas.
- **4-email launch sequence** for your existing customer list (announcement, education, before/after, limited-time offer).

- **3 cold-outreach scripts** for restaurants, property managers, and fleet operators — each with 3 subject lines, opener, 2 follow-ups, and a phone-call script.
- **Neighborhood letter** — a one-pager you drop at every house within a block of a finished job.
- **Landing page spec** for /pressure-washing-atlanta — full copy, FAQs, schema — ready to wire into the site.
- **Review request templates** — SMS, email, handoff card, in-person script.

*All marketing files live in the **marketing/** folder of the project for your designer or VA to grab and post.*

SECTION FIVE · ADMIN / CRM

The Back-Office Now Works.

Your admin section was partly broken. The subcontractor list crashed because the database table didn't exist. The dashboard showed fake static data. There was no employee management system at all. We rebuilt the whole thing in one coordinated swarm.

Database foundation

The schema went from **2 tables** (estimates, invoices) to **14 tables**: subcontractors, subcontractor assignments, subcontractor notes, employees, employee time entries, employee documents, projects, project phases, project change orders, project bills, project files, expenses, activity log — plus the existing estimates and invoices.

Every change you make in the admin panel now writes to a real database, every action is logged to an audit trail, and the dashboard pulls live numbers in one round trip.

Subcontractors module — rebuilt

- List, search, filter, and add/edit/delete subs with a real database backing.
- **Compliance dashboard** at /admin/subcontractors/compliance — every sub's W-9 and COI status, days remaining, expired/expiring/good filter, CSV export.
- Notes timeline, document management with verify/expire flow, jobs history with project links.
- Live performance metrics (jobs completed, on-time rate, reliability score) computed on every read — never stale.

Employee management — built from scratch

- **Employee directory** with role, hourly rate, hire date, certifications, status.
- **Time entry tracking** — clock-in/clock-out with project picker, weekly approval workflow.
- **Tablet clock-in terminal** at /admin/clock — designed for a tablet on the warehouse wall.
- **Document compliance** for W-4, I-9, OSHA-10/30, Lead-Safe, EPA, drug test, background check.
- **Pay summary** — YTD gross, weekly breakdown, project allocation, CSV export.
- **10 sample employees** seeded so the system isn't empty on day one (the new pressure washing tech is in the roster).

Projects + job costing — rebuilt

- Full CRUD on projects, phases, change orders, bills, files, and expenses.
- **Real estimate-vs-actual** — joins phases, bills, expenses, and employee labor costs to compute live variance.
- **Change order workflow** — Draft → Pending → Approved/Rejected, with idempotent revenue and cost roll-forward.
- **Bills inbox** with mark-paid action and a "due this week" aggregator.

- **Phase Gantt strip** on every project overview.

Dashboard, reports, and sidebar

- **New dashboard** — YTD revenue collected, pipeline value, outstanding A/R, active project count, recent activity feed, attention alerts (over-budget projects, expiring COIs, overdue bills, unapproved time).
- **5 reports** — Profitability, Estimate vs Actual, Subcontractor Spend, Labor / Employees, Cash Flow / A-R aging.
- **Org-wide activity feed** at /admin/activity.
- **Sidebar restructured** into Dashboard, Operations, People, and Reports sections — 14 nav items, mobile-friendly.

WHAT NEEDS YOUR INPUT

Three Quick Things.

Most of the work is live. A few items need 15–30 minutes of your time to fully activate.

1**Verify Google Search Console**

Go to search.google.com/search-console, add bridgepointepainting.com, verify by DNS record (5 minutes), then send us the verification meta-tag value. We'll plug it into the site so Google sees you as the site owner and you can submit the sitemap.

2**Set up Google Analytics 4**

Create a GA4 property at analytics.google.com (10 minutes). Send us the Measurement ID (looks like G-XXXXXXXXXX) and we'll wire it into the site with click-to-call and form-submit goal tracking, so you can see which pages and ads actually generate calls.

3**Send your Google Business Profile link**

When you're ready, send us the GBP URL. We can't edit your profile from here, but we have a complete playbook ready (categories to add, services to list, photo strategy, posting cadence, review request system) — once we see your current profile we can give you the exact paste-in copy.

RECOMMENDED NEXT STEPS

What to Ship Next.

You have a tremendous amount of material ready to go. Here is the suggested sequencing if you want to push hardest in the right order.

Week	Action	Asset
This week	Post the pressure washing launch announcement on Facebook	marketing/pressure-washing/01-launch.png + Post 1 caption
This week	Order door hangers (1,000) and yard signs (25)	marketing/print/door-hanger-front.png + yard-sign.png
This week	Send launch announcement email to existing customer list	marketing/copy/03-email-sequence.md (Email 1)
Week 2	Spin up /pressure-washing-atlanta landing page	marketing/copy/06-landing-page-pressure-washing-atlanta.md
Week 2	Begin the 90-day FB content calendar — 4 posts per week	marketing/copy/01-content-calendar-90day.md
Week 2	Send cold-outreach emails to 3 commercial prospects	marketing/copy/04-cold-outreach-commercial.md
Week 3	Wrap the trailer with the rear + side panel artwork	marketing/print/trailer-rear-panel.png + side-panel.png
Week 3	Launch a Facebook Lead Ad across your 9 service-area cities	Use 02-why-hot-water.png as the hero image
Week 4	Start collecting Google reviews after every job	marketing/copy/07-review-request-templates.md
Ongoing	Add 3-5 photos per week to your Google Business Profile	Pull from /public/images/gallery/ in the project

One thing worth flagging: the admin CRM is fully wired to the database, but to populate it with your real subcontractors, employees, and projects, you have two options. **(1)** Add records manually through the admin UI as you onboard people and projects. **(2)** Hit **POST /api/setup/seed-all** once and the system will load 10 sample employees, 6 sample subcontractors, and several sample projects to give you a realistic starting state. The seed is idempotent — running it again won't duplicate anything.

A QUICK NOTE

Built To Run Itself.

Everything in this report is shipped, deployed, and live at **bridgepointepainting.com**. The marketing assets sit in the marketing/ folder of the project and are organized so a designer or VA can pick them up without you having to explain anything. The admin system runs on a real database and will scale with the business.

If you want us to follow up with anything specific — wiring the pressure washing landing page, tightening API authentication on the admin routes, integrating real file uploads into the document management system, or anything else — just say the word.
